

April

Week 4 (25/04/16 - 29/04/16)

●MODULE 1:

LB preparation was successfully performed, for further usage in the culture of E. coli bacteria, which will be used for the transformation of the following biobrick plasmids: BBa_J04450, BBa_K541503, BBa_K1184000 and BBa_E0040.

●MODULE 2:

SOC medium preparation was intended , for further usage in the transformation protocol of the biobrick plasmids referenced in MODULE 1. The SOC medium got contaminated, so it was not useful anymore.

Summary

LB medium does not appear to be contaminated so it is ready for the protocols needed such as biobricks characterization. Further SOC medium preparation must be done, since it is an indispensable reagent for our characterization plans.
